SUMMARY

Computer science student who builds full-stack and AI-integrated software end to end: PostgreSQL-backed services, live third-party data, interactive 3D interfaces, LLM APIs, automated testing and deployment. Five shipped projects across web, mobile and developer tooling; seeking a software engineering internship.

EDUCATION

Alliance University, Bengaluru, India — July 2025 – May 2029

B.Tech in Computer Science and Engineering — Software Product Engineering | **CGPA 8.7/10**

Alliance University × Kalvium program: project-based learning, collaborative sprints and work-integrated engineering projects.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, Python, Java, Dart, SQL, HTML, CSS
Frontend & Mobile	React, Next.js, Vite, Tailwind CSS, Flutter, Three.js, React Three Fiber
Backend & APIs	Node.js, Express.js, REST APIs, third-party API integration, authentication
Databases	PostgreSQL, MongoDB, Firebase, Cloud Firestore, Redis
AI & LLM	OpenRouter, Gemini API, Google AI Studio, Ollama
Cloud & DevOps	Vercel, Render, Docker, GitHub Actions, Cloudinary
Tools	Git, GitHub, VS Code, Postman, Figma, Claude Code, Codex CLI, Antigravity IDE

PROJECTS

CODEVERSE — Interactive 3D Atlas of the Software Ecosystem — Live · GitHub

`Next.js 16 · React 19 · TypeScript · Three.js · React Three Fiber · Tailwind CSS 4 · PostgreSQL · Playwright`

- Built an interactive 3D universe of 17 foundational technologies and 29 sourced ecosystem relationships, with orbit/zoom/pan, category constellations, ranked search, shareable URLs and browser-history integration.
- Integrated live GitHub repository data and npm package metadata via server-side providers with validation, caching, deadlines, stale-result handling and rate-limit awareness; stored the catalog and metadata snapshots in PostgreSQL with parameterized SQL.
- Implemented deterministic, explainable recommendations, lazy dependency exploration from npm manifests, and repository activity classification from real timestamps.
- Backed by 155 passing Playwright, intelligence and activity tests; added keyboard navigation, reduced-motion support and graceful fallbacks when WebGL or the database is unavailable.

Zenugo AI — AI-Powered Health & Wellness Platform — Live · GitHub

`React · Vite · Node.js · Express.js · MongoDB Atlas · OpenRouter API · Vercel · Render`

- Built a full-stack conversational app: a React/Vite client calling Express REST APIs that use OpenRouter to generate AI responses.
- Persisted chat history in MongoDB Atlas, built responsive desktop/mobile layouts, and deployed to Vercel and Render.

Schedura — Event Management Platform — GitHub

`React · TypeScript · Node.js · Express.js · Firebase · PostgreSQL · Cloudinary · Tailwind CSS`

- Developed a full-stack platform to create, publish and manage events, with organizer/attendee workflows and role-based access.
- Implemented attendee registration, QR-code tickets with event check-in, and organizer dashboards with event analytics.
- Structured the codebase around REST APIs and reusable TypeScript components, using PostgreSQL and Firebase for data and services and Cloudinary for media; reworked across several iterations.

DevMap — Local Developer Project Intelligence [GitHub]
React · TypeScript · Vite

- Built a local-first workspace that helps developers understand unfamiliar codebases through project-structure exploration, technology detection, source-file inventory and architecture-oriented context.
- Kept core analysis deterministic so it runs without an external AI provider; included demo data for onboarding.

GearPilot — Laptop Recommendation Platform [GitHub]
React · Vite · Node.js · Express.js · MongoDB · REST APIs

- Built a quiz-driven recommendation flow for Indian laptop buyers that filters a seeded catalog of 30 curated laptops by budget and use case, with INR pricing and buy links.
- Implemented a React client with shared quiz state and an Express/Mongoose REST API using tag-based filtering.

MachineTrack — Real-Time Machine Inspection & Breakdown Reporting [GitHub]
Flutter · Dart · Firebase · Cloud Firestore · Git · GitHub Actions

- Frontend/Flutter developer on a team mobile app from the Alliance × Kalvium sprint, replacing shift-end reporting with real-time inspection and breakdown logging: app navigation, reusable widgets and shared design system, and screens for authentication, home, machines, records and profile, with search, filtering and loading/empty states.
- Integrated Firebase/Firestore through a service layer and machine models; collaborated via Git branches and pull requests and contributed automated tests and CI with GitHub Actions.
