Mukthar M J

mjmukthar96@gmail.com · Portfolio · GitHub · LinkedIn

Software engineering student building React, Next.js and TypeScript interfaces, full-stack web products and developer tools. Seeking a frontend engineering internship.

EDUCATION

Alliance University · Kalvium program July 2025 – May 2029

B.Tech Computer Science and Engineering · Software Product Engineering

TECHNICAL CAPABILITIES

Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, React Query, Three.js / React Three Fiber, Vite.

APIs & data: Node.js, Express.js, REST APIs, PostgreSQL, MongoDB, Firebase, Cloud Firestore, OpenRouter.

Mobile & delivery: Flutter, Dart, Git, GitHub Actions, Vercel, Render, Cloudinary, Playwright.

Additional experience / exploration: Python, Java, SQL, Redis, Docker, Gemini API, Google AI Studio, Ollama, Figma and API testing with Postman. Experience varies by tool; linked case studies show implementation scope.

SELECTED PROJECTS

CODEVERSE

Source · Live · Case study

Interactive 3D atlas of the software ecosystem.

Built a 3D atlas with ranked search, URL/history synchronization, sourced relationships and explainable recommendations. Server-side provider validation, caching, timeouts and PostgreSQL snapshots support live GitHub/npm metadata. Keyboard navigation, reduced motion and WebGL fallback; project documentation records 155 passing tests at its verification checkpoint.

Next.js 16 · React 19 · TypeScript · Three.js · React Three Fiber · Tailwind CSS 4 · PostgreSQL · Postgres.js · GitHub API · npm Registry API · Playwright

Zenugo AI

Source · Live · Case study

AI-powered health and wellness conversations.

Built a React/Vite conversation interface connected to Express REST APIs, OpenRouter responses and MongoDB Atlas history. Implemented authentication and responsive chat interactions; deployed the client to Vercel and API to Render.

React · Vite · Node.js · Express.js · MongoDB Atlas · OpenRouter API · Vercel · Render

Schedura

Local project · Case study

Event management for organizers and attendees.

Built organizer/attendee workflows, registration, QR tickets and check-in. Current local implementation uses React Query for server state, Firebase authentication and MongoDB transactions. Not deployed; configured source repository is not public.

React · JavaScript · Tailwind CSS · TanStack React Query · Node.js · Express.js · MongoDB · Mongoose · Firebase Authentication · Cloudinary

DevMap

Source · Case study

Local developer project intelligence.

Built a local-first repository workspace with deterministic technology detection, file inventory and architecture context. Core analysis runs in the browser without an external AI provider; optional local Ollama explanations are separate from detected facts.

React · TypeScript · Vite · Browser-local analysis · Playwright · Optional Ollama

GearPilot

Source · Live · Case study

A clearer shortlist for Indian laptop buyers.

Built quiz-driven laptop discovery, INR pricing, budget/use-case filters, comparison and localStorage-backed favorites. The verified public version uses typed local catalog data and React hooks; its backend is listed as planned.

React · TypeScript · Vite · Tailwind CSS · Curated local catalog · React hooks · localStorage

MachineTrack

Source · Case study

Real-time machine inspection and breakdown reporting.

Frontend/Flutter contributor in an Alliance University–Kalvium team sprint. Built navigation, reusable widgets, authentication and machine/record screens; contributed Firebase/Firestore models and service integration, search and loading/empty states, tests and CI. Authored feature pull requests alongside teammates' backend work.

Flutter · Dart · Firebase · Cloud Firestore · Git · GitHub Actions
